THE CONNECTED CAR

HARMAN's hallmarks of success in the connected car: Innovation, integration, and industry experience. Our industry leading solutions ensure your in-car experience is entertaining, productive, safe, and secure.

Embedded Infotainment

Telematics

Connected Safety

Connected Security

Our embedded infotainment solutions offer complete information, entertainment and communications capabilities – including 3D and augmented navigation, multimedia support and smart apps for device integration, high speed connectivity, intuitive and multi-modal user interfaces, and a new generation of automotive cloud services.

HARMAN success in the embedded infotainment market is a testament to its platform-based approach to design and engineering. Modular and scalable, HARMAN's infotainment platforms address the full spectrum of vehicles from premium to entry.

HARMAN's solutions for the premium segment includes next-generation navigation, entertainment, driver assistance and service functions. The company offers a number of first-to-market technologies such as augmented navigation, which blends live-motion video with graphics to provide drivers with a clearer understanding of the road ahead and visual cues for complex intersections. HARMAN's embedded infotainment solutions integrate industry-leading over-the-air (OTA) map and software update features, which seamlessly deliver infotainment firmware and map content updates to in-vehicle navigation systems. Other innovations include "sensor fusion" to collect and aggregate camera, sensor and on-board diagnostics (OBD) data and integrates it with both on-board and off-board navigation systems for more accurate and intelligent routing and safety features. And HARMAN's deep competence in both software and hardware design means its computing platforms can drive not only navigation and "center stack" functions but also the instrument cluster, for a more integrated approach to display and driver information systems such as head-up displays and gesture-based controls.

More recently, we have introduced advanced technologies such as augmented navigations, which blends live-motion video with graphics to provide drivers with a clearer understanding of the road ahead and visual cues for complex intersections. At CES 2015, HARMAN introduced the first connected navigation solution based on the Navigation Data Standard that incrementally updates map data in the field. This over-the-air (OTA) incremental update capability is the first in the industry that ensures map data is always up-to-date. Incremental updates of map data for rich navigation systems are critical to keep vehicle infotainment systems current in the field.

HARMAN also supports the latest in smartphone connectivity such as Apple CarPlay, Android Auto, Baidu's CarLife solution for the Chinese market, and MirrorLink. Merging these solutions with HARMAN's powerful embedded solutions provides automakers with flexibility to introduce connectivity features with attractive feature-to-cost ratios, with a range of options that meet virtually all global market-specific requirements.

AUTOMOTIVE SERVICES

Should read: "AUTOMOTIVE CLOUD SERVICES"

HARMAN is leading the industry developing solutions that make accessing content via the cloud easier and safer in the car and that simplify vehicle updates and maintenance. HARMAN's current portfolio of connected services includes Aha Radio, which is available in more than 60 countries and offered in more than 50 models of vehicles including Acura, Chrysler, Ford, Honda, Hyundai, Mazda, Porsche, Scion, Subaru and Toyota. HARMAN's suite of cloud platform offerings even helps to future-proof your vehicle by exchanging information with the vehicle manufacturer. Updates and enhancements are automatically downloaded as they become available, and real-time diagnostics alert you when routing services or repairs are indicated. For more about our automotive cloud offerings, visit the Connected Services section of our website

ABOUT CONNECTED CAR

HARMAN is the market leader in connected car solutions to the world's automakers. HARMAN's innovative and highly integrated infotainment technologies offer automakers the most complete solutions for advanced navigation, intuitive user interfaces, integrated audio, device connectivity, cyber security, and connected safety, just to name a few. From Boston to Berlin to Bangalore, HARMAN is delivering a dynamic in-car experience for an increasingly connected world.

We deliver integrated audio, video, lighting and control solutions for the world's best entertainment venues, cinemas, recording studios, and commercial and public spaces.

With a history spanning 65 years and more than 60 patents on amplifier technology, Crown is the world's leading manufacturer of power amplifiers.

Crown's amplifiers and system control products are a staple in live and fixed installations, from large stadiums and arenas to portable PA systems for musicians and DJs. Crown is the industry leader in networking amplifiers and embedding digital signal processing (DSP) into amplifiers, producing numerous innovative designs, including the DriveCore™ Install (DCI) series, which replaces more than 500 parts with one tiny chip.
